微信卡片回调方法
无权限异常

```
{
    "event": "taskcard_click",
    "to_user_name": "wpYPMqCAAAXo44t2aqdOzy-1jybZxFDA",
    "from_user_name": "woYPMqCAAArku7B2H1XAukqWfiTiWqvQ",
    "msg_type": "event",
    "create_time": "1706494772",
    "event_key": "people-workflow-approved",
    "task_id": "1706493755124_platform_329113846",
    "agent_id": "1000034"
}
```

回调请求参数WxCallbackActionReq

包含任务实例ID：flowInsTaskId

```
{
    "code": 200,
    "msg": "操作成功",
    "data": {
        "taskInstId": "329113846",
        "nodeType": "APPROVE_TASK",
        "taskInstStatus": "APPROVING",
        "processInstId": "329113824",
        "assigneeId": "484834",
        "nodeId": "2807685732400070158",
        "nodeName": "审批人",
        "createTime": 1706493755120,
        "autoSkipNeedDelete": false,
        "autoPass": false
    }
}
```

根据任务实例ID：flowInsTaskId去process服务查询任务信息
taskInstInfoDTO
从而得到该任务的AssigneeId: 484834
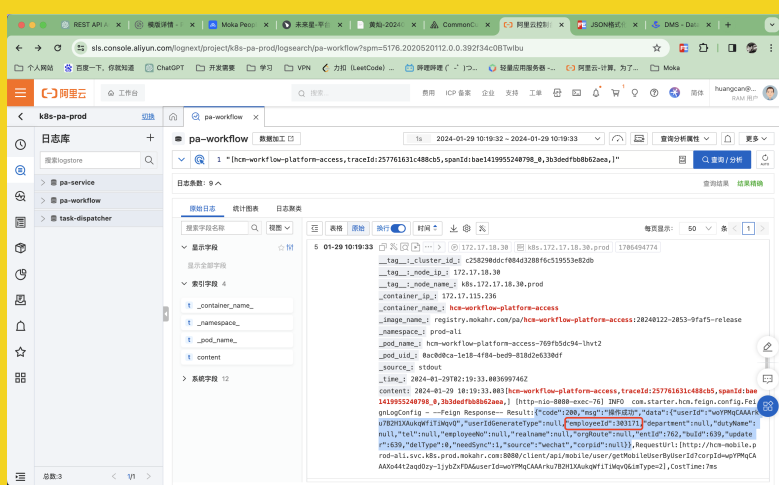

获取当前用户信息，从而得到当前用户的uid

异常位置：
if (StringUtils.isEmpty(taskInstInfoDTO.getAssigneeId())
        || !taskInstInfoDTO.getAssigneeId().equals(currentUserDto.getUid() + "")) {
    throw new CommonCustomException(ErrorCode.SYS_INVALID_AUTH);
}

即currentUserDto和taskInstInfoDTO中的AssigneeId标识不一致导致。
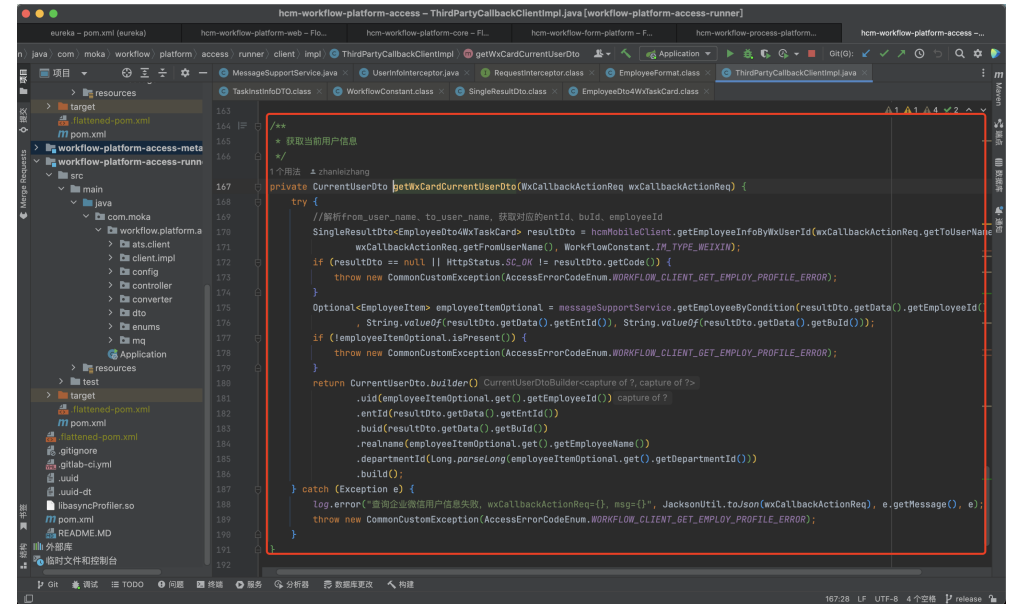

初步判断为，获取当前用户信息的id接口时从hcm-mobile拿到了错误的employeeId，导致无权限
